

OpenTech Systems Announces DR/Xpert for DB2

ORLANDO, FL / February 25, 2008 – – [OpenTech Systems, Inc.](http://www.opentechsystems.com), a leading provider of Disaster Recovery Solutions, Data and Storage Management Solutions and Data Security solutions for IBM z/OS centric data centers, today unveiled DR/Xpert for DB2 at Share's Spring 2008 Technology Conference. DR/Xpert for DB2 automatically audits, backs up and recovers DB2 table spaces eliminating the need to manually create and maintain DB2 image copy and recovery JCL.

DR/Xpert for DB2 performs intelligent auditing of the DB2 catalog, gathers data about new, changed, and deleted table spaces and indexes, and automatically generates the backup and recovery JCL to drive IBM, CA or BMC DB2 utilities. To ensure an efficient recovery, DR/Xpert for DB2 also performs intelligent grouping of DB2 objects and provides the automated processes to determine the most efficient object image copy and recovery. In addition, DR/Xpert for DB2 supports User-defined Recovery Groups so DB2 objects can be grouped together and assigned a recovery priority which can significantly improve recovery time and recovery point objectives.

"DR/Xpert for DB2 complements our family of DR products which audit and automate the DR process. Like our other DR products, DBS and DR/Xpert, DR/Xpert for DB2 performs a recoverability audit and ensures the recoverability of DB2 data by ensuring all table spaces and their associated arclogs are available for the recovery process," said Steve Sydow, OpenTech Systems CEO. Ensuring successful recoveries through intelligent auditing of recovery information and automation of the recovery process are hallmarks of all our DR products and the essence of the value we deliver to our customers."

About DR/Xpert for DB2

DR/Xpert for DB2 is the industry's most automated solution for identifying, backing up and recovering DB2 table spaces. Through continual analysis of DB2 table spaces, DR/Xpert for DB2 determines which tables spaces have changed and need to be backed up and automates the backup and recovery process to reduce user intervention, human error, and DR costs. DR/Xpert for DB2 can shorten backup and recovery windows, lower media and storage costs, and provide audit and tracking information to fulfill compliance requirements.

About OpenTech Systems, Inc.

OpenTech Systems Inc. was founded in 1994 to design, develop and market industry leading software solutions for IBM mainframe centric data centers and is dedicated to excellence in products, service and support. Specializing in Disaster Recovery, Data and Storage Management, and Data Security solutions for z/OS, OpenTech Systems is the vendor of choice for Fortune 1000 companies focused on ensuring business continuity, increasing operating efficiency and improving data security. OpenTech's partners include leading storage suppliers and IT outsourcers as well as premier resellers around the world.
